When you factor something you are splitting one value into two (or more) smaller ones that when multiplied together make the original. again, you can factor 6 into 2 and 3, so $6 = 2 \cdot 3$. factoring $4x^3 + 19x^2 + 19x - 6$ got $4x^2 + 11x - 3$ and $x + 2$. If you try and multiply those two together you should get the original. Let me know if that didn't help.
