The Power Method Like the Jacobi and Gauss-Seidel methods, the power method for approximating eigenvalues is iterative. First we assume that the matrix A has a dominant eigenvalue with corresponding dominant eigenvectors. Then we choose an initial approximation of one of the dominant eigenvectors of A.

About Power Technology Research. Too often is third-party market research disregarded by decision makers due to ambiguous methodology and uninspired presentation. This had led most market research to remain relegated to 'me-too' slides, often remaining a footnote in presentations. Our goal is to change that, and bring back pro-active decision making within the global power and e-mobility sectors by providing market research based on a transparent and flexible methodology.
