The Read Data from a Modbus/TCP Device COMMREQ requests a data transfer from a Modbus/TCP device to the PLC. The Read Data COMMREQ must reference an active Modbus/TCP channel previously established with the Open Modbus/TCP Client Connection COMMREQ. Registers, Coils or Exception Status data may be read from the remote Modbus/TCP device.

Modbus TCP is an Ethernet protocol. It is a modbus packet wrapped by a standard Ethernet protocol packet. It requires one encoder to wrap the data and another TCP/IP decoder to decode the data. You can not send a modbus packet to a standard Ethernet device and expect it to work. I guess the better question would be, can you send modbus TCP/IP

Modbus TCP encapsulates Modbus RTU request and response data packets in a TCP packet transmitted over standard Ethernet networks. The unit number is still included and its interpretation varies by application - the unit or slave address is not the primary means of addressing in TCP. The most important address here is the IP address.
