Partial Differential Equations: An Introduction, 2nd Edition

The aim of this is to introduce and motivate partial differential equations (PDE). The section also places the scope of studies in APM346 within the vast universe of mathematics. 1.1.1 What is a PDE? A partial differential equation (PDE) is an equation involving partial derivatives. This is not so informative so let's break it down a bit.

In mathematics, a partial differential equation (PDE) is an equation which imposes relations between the various partial derivatives of a multivariable function. The function is often thought of as an "unknown" to be solved for, similarly to how x is thought of as an unknown number, to be solved for, in an algebraic equation like $x^2 - 3x + 2 = 0$.

In this chapter we introduce Separation of Variables one of the basic solution techniques for solving partial differential equations. Included are partial derivations for the Heat Equation and Wave Equation. In addition, we give solutions to examples for the heat equation, the wave equation and Laplace's equation.

This is a linear partial differential equation of first order for μ :
 $M\mu_y - N\mu_x = \mu(N_x - M_y)$. 5. Two C^1 -functions $u(x,y)$ and $v(x,y)$ are said to be functionally dependent if $\det \begin{pmatrix} \mu_x & \mu_y \\ v_x & v_y \end{pmatrix} = 0$, which is a linear partial differential equation of first order for u if v is a given C^1 -function. A large class of solutions is given by ...
