Functional decomposition is a method of analysis that dissects a complex process in order to examine its individual elements. A function, in this context, is a task in a larger process whereby...

## **Definition**

Functional decomposition, according to the BABOK, "Helps manage complexity and reduce uncertainty by breaking down processes, systems, functional areas, or deliverables into their simpler constituent parts and allowing each part to be analyzed independently" (BABOK, 2016). You

In mathematics, functional decomposition is the process of resolving a functional relationship into its constituent parts in such a way that the original function can be

## **Functional decomposition - Wikipedia**

Functional decomposition is the analysis of complex systems and concepts by studying them as a set of related functions and components.

Functional decomposition is the

functions and processes in a hierarchical order, so they can be organized into processes or functions. The major purpose of functional Decomposition Diagram is to break down top- level general functions into smaller sub-functions and is mostly done during the project analysis phase.

The functional decomposition is the depiction of the functions that will be achieved by a system.

The functional decomposition is laid out in a hierarchical fashion. At the top of the decomposition is the general function of what is to be accomplished by the system. At the second level are the main

A functional decomposition or WBS is a visual document that illustrates how complex processes break down into their simpler components. WBS is an effective approach to allow for an independent analysis of each part. WBS also helps capture the full picture of the project. We suggest the following logic of functional decomposition:
