Understanding Digital Signal Processing with MATLAB and Solutions discusses receiving signals that most electrical engineers detect and study. The vast majority of signals could never be detected due to random additive signals, known as noise, that distorts them or completely overshadows them.

Understanding Digital Signal Processing Solutions

Signal processing has been used to understand the human brain, diseases, audio processing, image processing, financial signals, and more. Signal processing is slowly coming into the mainstream of data analysis with new deep learning models being developed to analyze signal data.

There is more than one solution..at least $T = 1/100$ and $T = 11/100$ work. To get such a simple one line solution they are simply using $\text{sinusoid}(nw) = \text{sinusoid}(n(w+2\pi))$. The $11/100$ works immediately for the first $\sin(\pi n/5)$ but for the cosine they add 2π several times until the original cosine matched the sampled one when using $T = 11/100$.
