The Valveless Pulse Jet

How a pulsejet works is actually very simple. With a valveless design (which this is), fuel and air are directed into a combustion chamber. Once the fuel has ignited, flame exits the exhaust tube and essentially creates a vacuum in the combustion chamber which draws more fuel and fresh air in.

Homemade Valveless Pulsejet Motor | Make:

A pulsejet engine (or pulse jet) is a type of jet engine in which combustion occurs in pulses. A pulsejet engine can be made with few or no moving parts, and is capable of running statically (i.e. it does not need to have air forced into its inlet, typically by forward motion).

Pulsejet - Wikipedia

One such engine with an intake duct mounted on the front face of the combustion chamber, the SNECMA valveless pulse-jet, known as the "Escopette," has the mouth of the duct turned back 180 degrees,...
