The three different types of communication are verbal, nonverbal and visual. The two major forms of verbal communication are written (or typed) and oral. The major type of nonverbal is body language, especially visual cues. Visual communication, such as using pictures, graphs and the like, is fast gaining ground either to reinforce or to replace written messages.

A sign language is quite different to a spoken language. It is a language where gestures and facial expressions are used in order to convey information instead of vocal tracts. This is one of the key differences between a sign language and a spoken language.

## **Difference Between Sign Language and Spoken Language**

...

Signed modes of spoken languages, also known as manually coded languages, which are bridges between signed and spoken languages The list of deaf sign languages is sorted regionally and alphabetically, and such groupings should not be taken to imply any genetic relationships between these languages (see List of language families ).

## **List of sign languages - Wikipedia**

Language is a vital component of communication as it helps in verbal communication through words. It helps us in conveying our thoughts, ideas, opinions, even our aspirations, and frustrations. However, our body language, facial expressions, eye movements, and gestures make up an important part of communication known as non-verbal communication.

## **Difference Between Verbal and Nonverbal Communication**

...

The communication which is based on signs, not on words is Non-verbal communication. There are very fewer chances of confusion in verbal communication between the sender and receiver. Conversely, the chances of misunderstanding and confusion in non-verbal communication are very much as the use of language is not done.

## **Difference Between Verbal and Nonverbal Communication**

...

Written language tends to be more complex and intricate than speech with longer sentences and many subordinate clauses. The punctuation and layout of written texts also have no spoken equivalent. However some forms of written language, such as instant messages and email, are closer to spoken language.

Signed languages express spatial relationships much more easily than spoken languages. If you wanted to communicate that "the cup is on the table," speakers must use words to explain it. A signer could physically express that concept by using one hand to sign 'cup' and the other to sign 'table,' by placing the former on top of the latter.

## **Verbal and Signed Languages. Comparing Structures ...**

There is a common misconception that sign languages are somehow dependent on spoken languages: that they are spoken language expressed in signs, or that they were invented by hearing people. Similarities in language processing in the brain between signed and spoken languages further perpetuated this misconception. Hearing teachers in deaf schools, such as Charles-Michel de l'Épée or Thomas ...

## **Sign language - Wikipedia**

Past literature shows that the brain regions involved in the understanding and production of verbal languages are the same brain regions that allow one to communicate in sign language. Brain lesion studies have confirmed that both spoken and signed language rely on a common system of neural and cognitive mechanisms. Further research has confirmed that by acquiring sign language skills at a ...

However, across signed languages, many signforms readily evoke mental images (e.g. the sign HAMMER resembles the motion involved in hammering). Here we assess the relationship between language and imagery, comparing the performance of English speakers and British sign language (BSL) signers in meaning similarity judgement tasks.
