Evolvability Evolvability is a term which is closely related to Biology. Evolvability is referred as the non-heritable variation. For an embedded system, the quality attribute ‘Evolvability’ refers to the ease with which the embedded product (including firmware and hardware) can be modified to take advantage of new firmware or hardware ...

Evolvability is not a characteristic of individuals: it emerges from an interplay between (i) individuals and their developmental systems, (ii) the populations and lineages of which they are a part, and (iii) the environments within which they are embedded. Components of Evolvability If evolvability is a dispositional feature of a lineage, there is an important sense in which differences in evolvability do not explain differences in lineage disparity.

The systems discipline is decomposed in views and qualities and complemented with a framework to integrate again. The qualities are taken as starting point to define system design capabilities. These capabilities are analyzed and a set of embedded system capabilities is proposed. The ESI approach with projects and capabilities is described.
